FOREX MARKET

Forex is the global financial market that allows one to trade currencies.

If you think one currency will be stronger versus the other, and you end up correct, then you can make a profit.

Once upon a time, before a global pandemic happened, people could actually get on airplanes and travel internationally.

If you've ever traveled to another country, you usually had to find a currency exchange booth at the airport, and then exchange the money you have in your wallet into the currency of the country you are visiting

The foreign exchange market is the most liquid financial market in the world. Traders include governments and central banks, commercial banks, other institutional investors and financial institutions, currency speculators, other commercial corporations, and individuals. According to the 2021 Triennial Settlements, average daily turnover was \$7.5 trillion in April 2022 (compared to \$1.9 trillion in 2004).[3] Of this \$6.6 trillion, \$2.1 trillion was spot transactions and \$5.4 trillion was traded in outright forwards, swaps, and other

CRYPTOCURRENCY

A cryptocurrency, crypto-currency, or crypto[a] is a digital currency designed to work as a medium of exchange through a computer network that is not reliant on any central authority, such as a government or bank, to uphold or maintain it.

Individual coin ownership records are stored in a digital ledger, which is a computerized database using strong cryptography to secure transaction records, control the creation of additional coins, and verify the transfer of coin ownership. Despite the term that has come to describe many of the fungible blockchain tokens that have been created, cryptocurrencies are not considered to be currencies in the traditional sense, and varying legal treatments have been applied to them in various jurisdictions, including classification as commodities, securities, and currencies. Cryptocurrencies are generally viewed as a distinct asset class in practice. Some crypto schemes use validators to maintain the cryptocurrency. In a proof-of-stake model, owners put up their tokens as collateral. In return, they get authority over the token in proportion to the amount they stake. Generally, these token stakers get additional ownership in the token over time via network fees, newly minted tokens, or other such reward mechanisms. Trace amounts of cryptocurrency that are not worth spending because of the fee needed are called "dust"
